## more on ucd

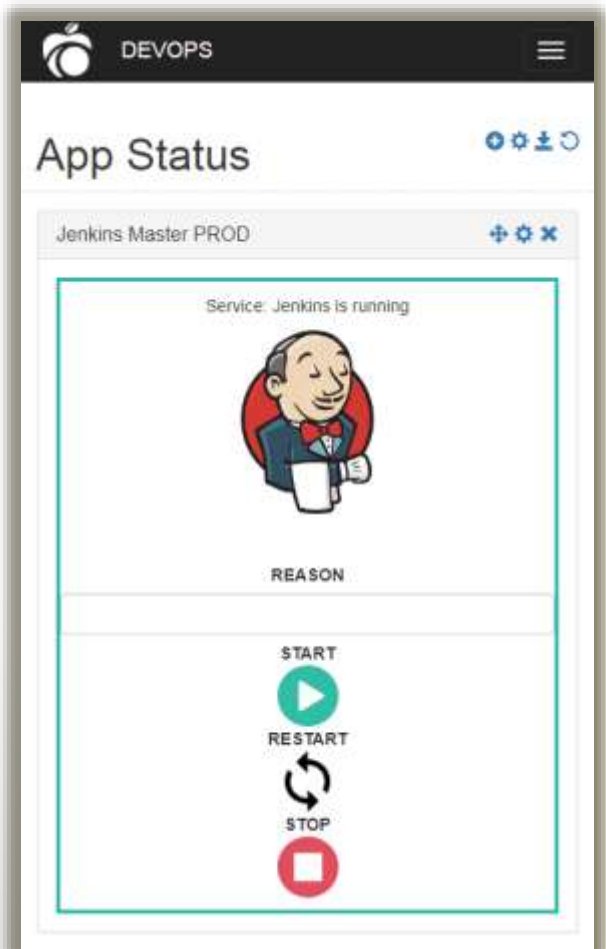

- RISK's custom deploy (incremental and exportImport tool)
- Some processes were updated get password from CyberArk
- Remote windows service deploy template. (don't need agent install on server, all component map to ucdagentdev01)

## Powershell unit test

- Pester
- Publish results to Jenkins and Sonarqube

# IDF Widget

- Service Status Ctrl
- Angular
- ucdHaService

## ASP.NET Web API Help Page

### Introduction

Provide a general description of your APIs here.

### OrgRepos

| API                                           | Description                 |
|-----------------------------------------------|-----------------------------|
| <a href="#">GET api/OrgRepos/{id}/details</a> | No documentation available. |
| <a href="#">GET api/OrgRepos/{id}</a>         | No documentation available. |
| <a href="#">POST api/OrgRepos</a>             | No documentation available. |

### OrgReleases

| API                                                           | Description                 |
|---------------------------------------------------------------|-----------------------------|
| <a href="#">GET api/OrgReleases/{id}/{repo}</a>               | No documentation available. |
| <a href="#">GET api/OrgReleases/{id}/{repo}/latestRelease</a> | No documentation available. |
| <a href="#">GET api/OrgReleases/{id}/{repo}/{tag}</a>         | No documentation available. |

### TeamUsers

| API                                    | Description                 |
|----------------------------------------|-----------------------------|
| <a href="#">GET api/TeamUsers/{id}</a> | No documentation available. |

- Service now request send to wrong group

hey michael i actually had sent a similar req to this on service now months ago.. and got approved. RITM0070773

but it is on different servers.

oh ok but usually infosec team they will not accept the RITM  
that time this ritm RITM0070773 worked by windows server team  
now these kind of requests are handled by infosec

okay  
so unfortunatelt  
youre going to have to resubmit this one again  
because genreal inquiries dont need approval by your manager  
and this request has to do something with AD  
which does need approval from ur manager  
sorry man

your manager  
you have to call 7800  
have them submit a new request for AD  
and theyll create it  
itll go to ur manager  
he/she'll approve it

End

See you next year
